

Kretanje je važno

Inovativna smo, dinamična tvrtka s vizijom da razgibamo Slovačku. Usredotočeni smo na realizaciju vanjskih i unutarnjih sprava za vježbanje, dječjih igrališta, fit parkova, vanjskih fitness sprava, stijena za penjanje, sportskih terena i mjesta za razne vrste aktivnosti i odmora. Osim postavljanja, bavimo se i edukacijom o općem zdravlju građana u obliku predavanja i tečajeva, festivala u školama.

Naša priča

Priča naše tvrtke počela je 2014. godine kada smo svoju strast pretvorili u posao. Bili smo mladi ljudi sa pozitivnim stavom prema sportu, koji su tražili način da aktivno i smisleno provedu svoje slobodno vrijeme. U to je vrijeme naša strast postala vježba s težinom vlastitog tijela, kalistenika. Kako u našem gradu u to vrijeme nije bilo prostora za takvu vježbu, obratili smo se tadašnjoj upravi sa zahtjevom da se stvori prostor za ovakve sportske aktivnosti. Zahvaljujući našim preporukama i savjetima, upravu je oduševio naš entuzijazam te je uspjela izgraditi dosad najveće workout igralište u Slovačkoj. Zahvaljujući ovom koraku, zajednice drugih gradova počele su nas tražiti za pomoć u cijelom procesu izgradnje workout igrališta. Tada smo odlučili svoju strast pretvoriti u posao i osnovali smo tvrtku Octago. S vizijom da ljudima omogućimo da smisleno provode vrijeme radeći na svom tijelu i zdravlju.

Tijekom sedam godina neprestano smo proširivali i inovirali svoj portfelj proizvoda sve do sadašnjeg oblika. Kao mladi poduzetnici i sportaši, stalo nam je do društvenog i održivog poduzetništva. Gradimo mjesta na kojima ljudi svih dobi mogu aktivno provoditi vrijeme radeći na sebi. Mjesta na kojima se ljudi susreću, sklapaju nova prijateljstva, stvaraju zajednice i priče. Vježbe i aktivnosti na otvorenom sada su u prvom planu i ljudima je stalo do okruženja u kojem će vježbati ili gdje će se igrati njihova djeca. Stoga neprestano nastojimo modernizirati i prilagođavati svoje proizvode i prostore za najveću udobnost svih ljudi. Zahvaljujući pametnim rješenjima naših partnera, ne zaboravljamo ni edukaciju korisnika ili inovacije. Od uspješnog startup-a uspjeli smo stvoriti rastuću tvrtku koja se širi izvan slovačkih granica. Danas Octago ima više od 300 uspješnih realizacija u 5 europskih zemalja.

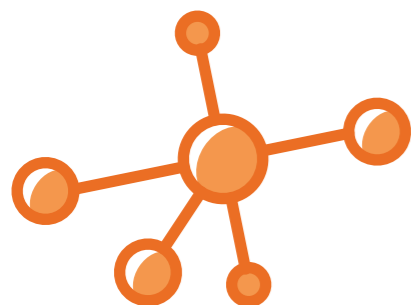

Proizvedeno u Slovačkoj

Sve naše proizvode dizajniramo, proizvodimo i testiramo u našoj proizvodnoj hali u mjestu Vranov nad Topľou. Isto tako, većina naših izvođača dolazi iz Slovačke, zahvaljujući čemu možemo jamčiti visoku kvalitetu svih naših proizvoda.

Certifikat

Naše sprave certificirala je međunarodna tvrtka TÜV SÜD prema europskom standardu STN EN16630: 2015.

Tehnologija

Dugogodišnji razvoj osigurava visoku kvalitetu, jedinstven dizajn i maksimalnu funkcionalnost.

QR kodovi

Na našim spravama za vježbanje nalaze se QR kodovi za pristup aplikaciji s primjerima vježbi pomoću kojih vježbači mogu sastaviti svoj trening.

Tehnologija

U proizvodnji svojih proizvoda koristimo najsuvremenije 3D tehnologije za modeliranje, CNC, vodene, laserske i strojeve za savijanje. Brinemo o svakom detalju, bilo da je riječ o odabiru korištenih materijala ili površinskoj obradi. Na ovaj način možemo garantirati maksimalnu kvalitetu svakog proizvoda.

Preciznost lasera

Lasersko rezanje jedan je od najsuvremenijih i najpreciznijih načina rezanja materijala. Ovu tehnologiju koristimo u proizvodnji naših proizvoda od čelika. Visoka kvaliteta reza minimizira potrebu za daljnjom obradom, pa zahvaljujući tome možemo garantirati savršenu preciznost svake komponente.

Antikorozijska zaštita

Sve sprave podliježu površinskoj obradi. Prvo se pjeskare, a onda slijedi drugi sloj - poliesterski epoksid. FBE se naširoko koristi kao antikorozijska zaštita za čelične cijevi i kvadre. Premazi epoksida također se koriste kao temeljni premaz ili osnovni premaz za bolje prijanjanje boja namijenjenih za karoserije i brodske dijelove, posebno za metalne površine gdje je važna otpornost na koroziju.

Snaga vode

Rezanje vodenim mlazom je sljedeća moderna tehnologija za rezanje materijala. Koristimo je u proizvodnji naših proizvoda od čelika, plastike ili gume. Velika prednost u odnosu na lasere je mogućnost rezanja materijala različitih struktura, uključujući i višeslojne materijale, a da im se ne lome rubovi. To je jedini izbor u proizvodnji dijelova od mekih materijala poput plastike ili gume.

Premaz prahom

U postupku premazivanja prahom koristimo revolucionarnu tehnologiju za nanošenje elektrostatičkih ljepljivih zrna boje u prahu. Zatim se peče u peći zagrijanoj na 200°C. Rezultat ovog procesa je pouzdana, izdržljiva i visokokvalitetna površinska obrada. Njegova je prednost visoka otpornost na mehanička oštećenja i ne sadrži tvari štetne za zdravlje i prirodu. Zato je ova vrsta površinske obrade prikladna za unutarnje i vanjske proizvode.

MODIFIKACIJE NAPRAVLJENE OD POJEDINAČNIH DIJELOVA

Tijekom izrade modela setova oslanjali smo se na vlastito iskustvo i povratne informacije aktivnih vježbača. Sve dimenzije i izgled dijelova nisu slučajni, već se temelje na izvornim preporukama korisnika. Jedini u Slovačkoj koristimo okrugle stupove u kombinaciji posebno dizajniranim prstenom koji drži vratila i druge dijelove. Našim smo spravama uspjeli spojiti dizajn s funkcionalnošću i kvalitetom.

MODULARNE STIJENE ZA PENJANJE S MNOGO KOMBINACIJA

Vanjske stijene za penjanje namijenjene su amaterima i iskusnim penjačima, a penjanje čine dostupnim apsolutno za sve, bez obzira na dob, iskustvo ili kondiciju. Boulder stijene su u principu složene slagalice koje se sastoje od dvije vrste modula i lako im se može promijeniti veličina i konfiguracija zahvaljujući jednostavnim manipulacijama i mogućnosti mijenjanja njihovog sastava.

Kritična visina pada

Pogodno za djecu u invalidskim kolicima

Dizajn i kvaliteta

Stupovi

Za pričvršćivanje bočnih ploča od HDPE plastike koristimo stupove od eloksiranog aluminija sa središnjom lajsnom i profilom 90 x 90 mm. Sve rupe u aluminiju izbušene su na CNC stroju radi preciznosti. Za spajanje čeličnih dijelova (šipke, podloge, mostovi itd.) Koristimo navoje od nehrđajućeg čelika.

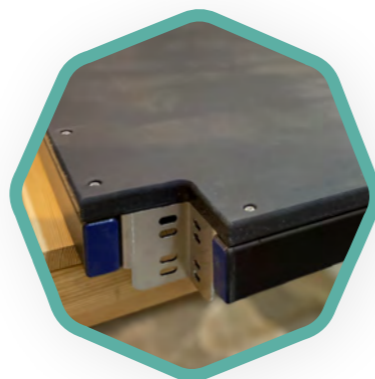

Tobogani, tuneli, vodeni tobogani

Izrađene su od 100% recikliranog materijala i UV stabilizirani polietilen (PE).

Podloge, stube

Koristimo protuklizni 20 mm HDPE podovi i stepenice koji ne zahtijevaju održavanje i imaju jako dug rok trajanja.

Drvo

Drveni dijelovi izrađeni su od FSC certificiranog drva "Larix sibirica" bez površinske obrade ili s površinskom obradom - laneno ulje.

Trapezi, ljestve, rukohvati

Svi metalni dijelovi su izrađeni ne hrđajući čelik.

Užad

Uže i elementi za penjanje izrađeni su od PP (polipropilena). Konop je debljine 16 mm sa čeličnom armaturom i spojena je aluminijским spojnicama.

Nadstrešnice, bočne stranice, ograde, stepenice, diskovi, krugovi

Koristimo HDPE i HPL plastične ploče izrezane na našem CNC stroju. Također koristimo tehnologiju za savijanje HDPE ploča za klupe, košare i tobogane (na visini platforme manje od 60 cm).

Vezni materijal

Izrađen je od nehrđajućeg čelika.
